EDUCATION

- PhD in Computer Science
UNICAMP | 2023 - Present
- MSc in Statistics
UNICAMP | 2021 - 2023
- BSc in Mechanical Engineering
ESPOL | 2014 - 2020

SKILLS

GenAI & NLP: Large Language Models (LLMs), RAG, Prompt Engineering, LangChain, Hugging Face, Agentic AI.

Data Science & Statistics: Machine Learning, Deep Learning, Statistical Modeling, Predictive Analytics, Data Visualization.

Programming & Tools: Python, PyTorch, R, Streamlit, Git, Blender.

Languages: Spanish (Native), Portuguese (Advanced), English (Professional).

SUMMARY

PhD Researcher in Generative AI & Large Language Models at the Laboratory of Computing and Automation (LCA), Universidade Estadual de Campinas (UNICAMP). My research focuses on multimodal generative architectures for 3D gesture synthesis driven by speech and text, winner of the Reproducibility Award at GENE 2025 (ACM Multimedia).

With a Master's in Statistics and a background in Mechanical Engineering, I bridge the gap between rigorous statistical modeling and AI innovation. My technical stack spans RAG, LangChain, PyTorch, and Agentic AI. I am passionate about building scalable, production-ready AI systems that serve both academic research and industry applications in Tech, FinTech, and Consulting.

EXPERIENCE

PhD Researcher — Laboratory of Computing and Automation (LCA)

UNICAMP, CAMPINAS, BRAZIL | 2023 – PRESENT

- Researching and designing multimodal generative architectures for 3D virtual character gesture synthesis.
- Developing state-of-the-art LLM-driven pipelines that seamlessly integrate speech, text, and motion data.
- Key Achievement: Won the Reproducibility Award at GENE 2025 (ACMMM) for demonstrating robust, reproducible gesture generation from speech using LLMs.

Academic Researcher & Teaching Assistant

UNICAMP, CAMPINAS, BRAZIL | 2021 – 2023

- Conducted applied research intersecting Machine Learning, Generative AI, and advanced Statistics.
- Acted as a Teaching Assistant for advanced courses in statistics and computational methods, simplifying complex algorithms for students.

Master's Researcher — Institute of Statistics

UNICAMP, CAMPINAS, BRAZIL | 2021 – 2023

- Developed complex Markovian models, metrics in state spaces, and executed large-scale simulations using Markov chains.
- Bridged computational programming with rigorous statistical theory, culminating in the publication of a novel metric in the journal Entropy.

DEVELOPED PROJECTS

LLM-Gesture-Pipelines (Award-Winning AI Model): An LLM-driven pipeline for generating realistic 3D body gestures from speech and text.

Benchmarking-SDGG-Models: Framework for evaluating Speech-Driven Gesture Generation models across unseen voices and noisy environments.

Systematic Review Automator: Autonomous AI-powered tool that automates metadata extraction from papers using agentic AI workflows.

eToro Portfolio Evolution: Financial analytics dashboard with implementation of a multi-agent AI orchestrator for robust portfolio analysis.
